

SMART SORT

Proven, Accurate Sortation Software

Solution Highlights

- Eliminates costly missorts with accurate sortation
- Visibility to key metrics for improved operational management
- Baggage Alarm, Event and Flight Schedule History with powerful search capabilities
- Gantt chart style Flight Schedule Management
- Full range of Operational and Maintenance Reports, with automated report generation
- Web-based Client provides access to reports and search screens
- Enhanced Manual Encode Consoles
- Remote support provides 24/7 access to experts

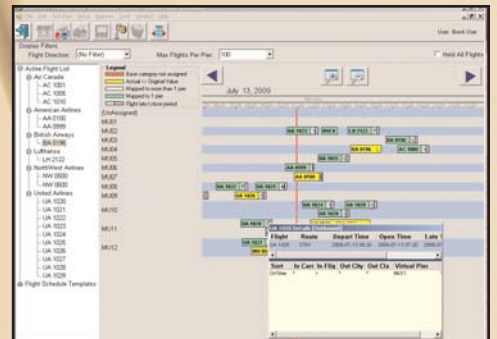

Sortation is Critical to Operations

- Checked bags must be sorted to airline piers or make-up units in real-time. Missorts can lead to bags missing flights.
- Visibility of the key metrics is often missing or inadequate, limiting the potential for operational improvements.
- Individual bag event history is often not available for troubleshooting operations as it pertains to delayed or lost bags.

SmartSort - Accurate Every Time

- A proven, accurate sort solution currently used by many of the world's largest airports and airlines.
- Sorts several different tag types including 10-digit IATA, IATA fallback, flight tags, pier tags and user-defined tags.
- Provides bag tracking and reporting for all key performance indicators, so operational improvements can be identified, implemented and measured.

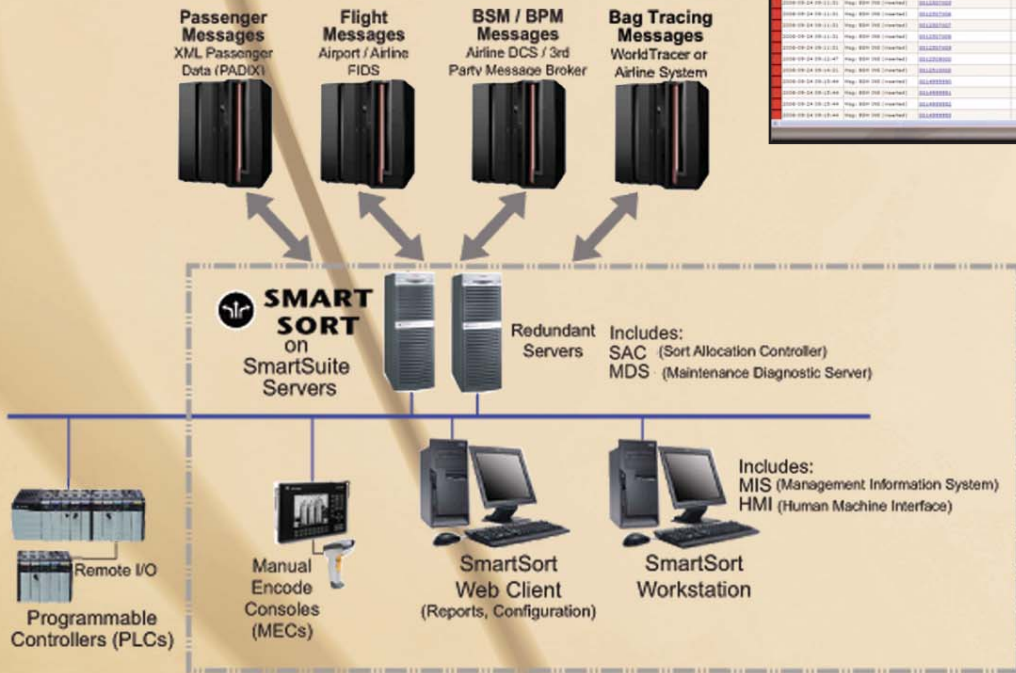

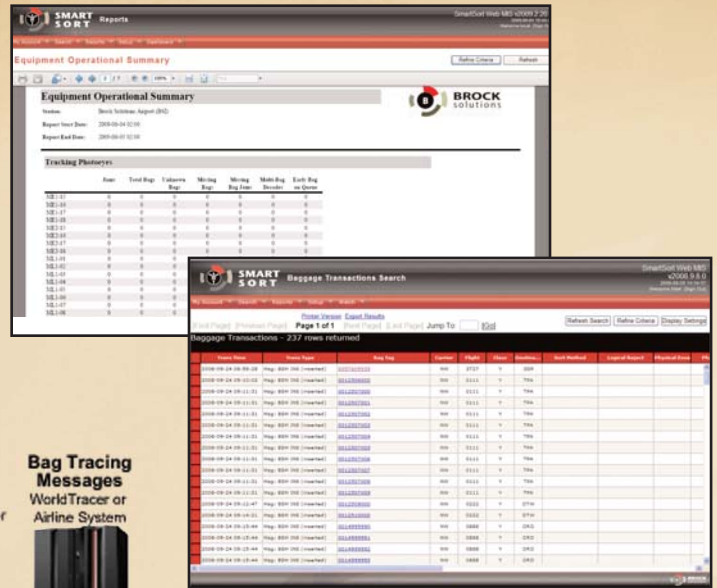

*"The existing sort controller for our International Terminal and Terminal 3 was failing 2-3 times per day and our baggage reports were unreliable being off by as much 3,000 bags per day. Under a very compressed schedule, Brock replaced our old controller with their SmartSort controller, and since it has been installed our system has been working great with no failover issues and we now have accurate reporting."
- Tom Rodrigues, Project Manager*

Information at Your Fingertips

SmartSort is a fully integrated baggage handling sortation solution that includes the following systems:

- Sort Allocation Controller (SAC)
- Manual Encode Console (MEC)
- Maintenance Diagnostic System (MDS)
- Management Information System (MIS)
- Human Machine Interface (HMI)

SmartSort can be implemented as a stand alone system or integrated with other SmartSuite modules providing complete end-to-end tracking of passengers and their baggage.

About Brock Solutions

Having completed over 4,000 automation projects worldwide, Brock Solutions is one of the largest industrial engineering solution providers of real-time automation systems for manufacturing, transportation and logistics. Brock Solutions is proud to be named the 2009 Control Engineering System Integrator of the Year.

Brock Solutions is an IATA Strategic Partner helping airports and airlines improve their operations through a number of solutions including passenger bag drops, passenger security and tracking, bag management and recovery, baggage handling systems and in-line explosive detection systems.
